

How to import EQ settings in EclerNet Manager

In this zip file you'll find the ARQISi EQ setting files ready to import to any MIMO/NXA output channel, also a xls file with the settings information.

1. Save the ARQISi EQ settings in your hard-drive.
2. Execute EclerNet Manager software. Add a MIMO/NXA device or select it from your project.
3. Go to OUTPUT tab, and active the PARAMETRIC EQ section
4. Click on the PARAMETRIC EQ section options button

5. Click on Import EQ settings and select the desired EQ setting.

Remember that you can view a visual representation by click on the graph button, located at the bottom right corner:
